

Hotsec is sophisticated building management software which uses most commonly Paradox EVO panels to work together as complete solution.

The software can integrate unlimited number of EVO panels over IP network into one client-server based system. It provides most of important features for EVO panels like:

- Centralized user management
- Alarm visualization using CAD based building plans
- Panel control features like; arm/disarm area, PGM control, open/close door. All the control features are visualized into drawing.
- Reports and log of all panel events
- E-mail of events with specified criteria
- Multiple language support (currently: English, Russian, Finnish, Swedish, Estonian and Latvian)
- IP camera support, in case of specified alarm image will pop-up
- IPR512 support (any type of panel can be visualized)
